PRIVATE PREVIEW

PRODUCT DOCUMENTATION

CacheOLAP BigQuery

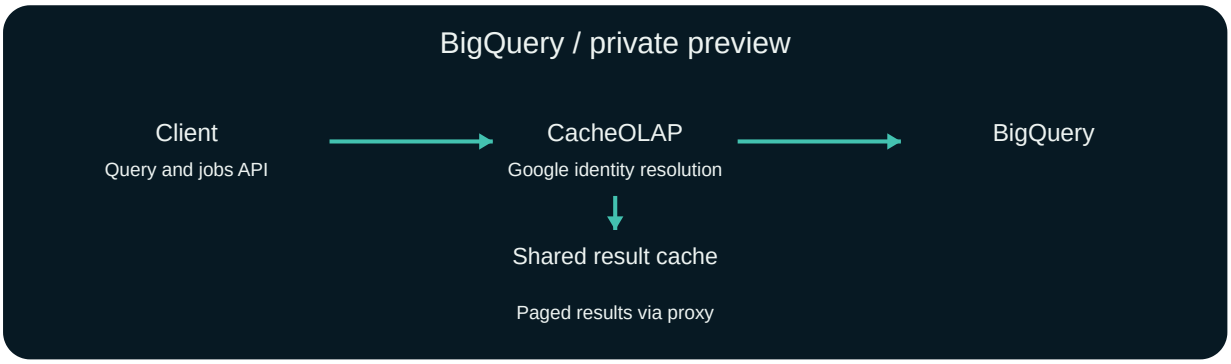
Compatibility guide

Reviewed November 2026

Scope and status

This experimental integration is available for private preview and is outside the native proxy support matrix. It follows selected client paths and does not translate SQL. Compatibility depends on the exact platform, driver, authentication and workload.

Request path



Test environment

Google Cloud test project; google-cloud-bigquery 3.46.2. These cases are validated as relay traffic, not a blanket certification.

Validated cases

Query and job paths, pagination, SQL errors, DML, table writes and multipart loads were validated as relay traffic. Cache hits were exercised on both query and job paths, including paging and an observed write.

Integration boundaries

Per-principal mode denied a second identity without dataset access; shared mode returned the cached result. Shared mode requires an intentional permission boundary.

Not validated

Other client versions, Storage Read API, cancellation, large results, multiple concurrent proxy instances, hooks with hits and the console with real traffic were not validated.

External changes require a freshness strategy. Qualify the workload with sales@houdata.eu.
