PRIVATE PREVIEW

PRODUCT DOCUMENTATION

CacheOLAP Databricks

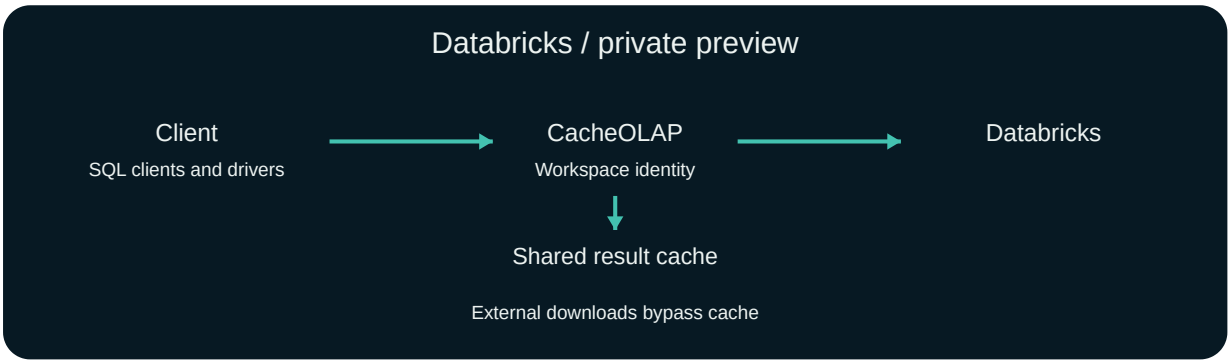
Compatibility guide

Reviewed November 2026

Scope and status

This experimental integration is available for private preview and is outside the native proxy support matrix. It follows selected client paths and does not translate SQL. Compatibility depends on the exact platform, driver, authentication and workload.

Request path



Test environment

Free Edition serverless warehouse; SDK 0.158.0, SQL connector 4.8.0 and JDBC 3.4.4. These cases are validated as relay traffic, not a blanket certification.

Validated cases

Selected SQL API and Thrift over HTTP paths were validated as relay traffic. Repeated reads, chunked results, Arrow session results and an observed write were exercised. A changed session schema prevented reuse.

Integration boundaries

Large results delivered through external links are not retained on that path. API changes outside inspected SQL require an explicit freshness strategy.

Not validated

OAuth and service principals, other client versions, cached external-link results, real-traffic console use and paid workspaces were not validated.

External changes require a freshness strategy. Qualify the workload with sales@houdata.eu.
