PRIVATE PREVIEW

PRODUCT DOCUMENTATION

CacheOLAP Snowflake

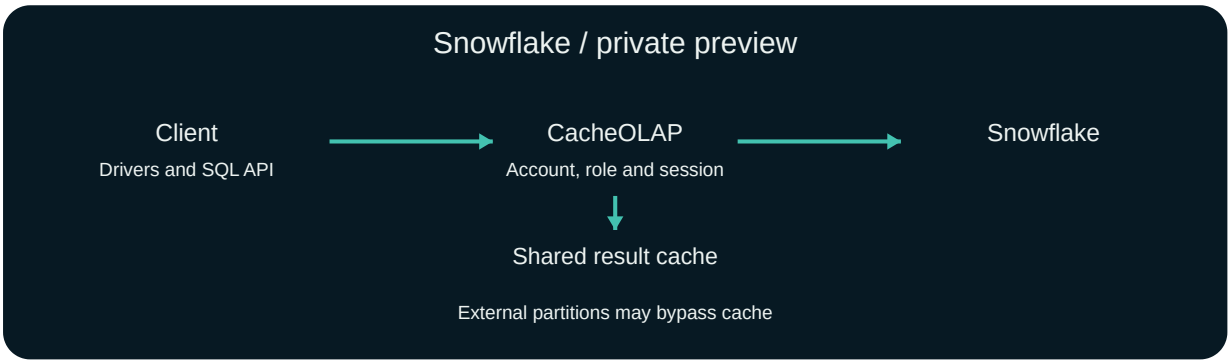
Compatibility guide

Reviewed November 2026

Scope and status

This experimental integration is available for private preview and is outside the native proxy support matrix. It follows selected client paths and does not translate SQL. Compatibility depends on the exact platform, driver, authentication and workload.

Request path



Test environment

Trial account; Python connector 3.18.1 and 5.1.0, JDBC 4.4.0 and gosnowflake 1.19.1. These cases are validated as relay traffic, not a blanket certification.

Validated cases

Driver paths were validated as relay traffic against direct results, including repeated reads, session changes and an observed write. SQL API v2 with a programmatic access token and a session-token renewal case were also exercised.

Integration boundaries

Session and identity context affects reuse. Results delivered through external storage or unsupported partitions cannot be assumed cacheable.

Not validated

ODBC and .NET, OAuth and key-pair identity, other SQL API configurations, client-written results and a paid account were not validated.

External changes require a freshness strategy. Qualify the workload with sales@houdata.eu.
